Social Threat and Project Impact

Need a tool to build trust in media and open dialogue between conflicting viewpoints.

Our Solution: Fake News Detector

Create an app that makes **fake news** detection easier, more streamlined and consistent.

Fake News Detector – Project Plan

Our Steps:

1. Find the [fake & real news dataset](#)
2. [Data cleaning](#)
3. [EDA](#)
4. [Feature Engineering](#)
5. [ML model training](#)
6. [App Development & Deployment](#)

Data Cleaning

Fake

Real

Exploratory Data Analysis

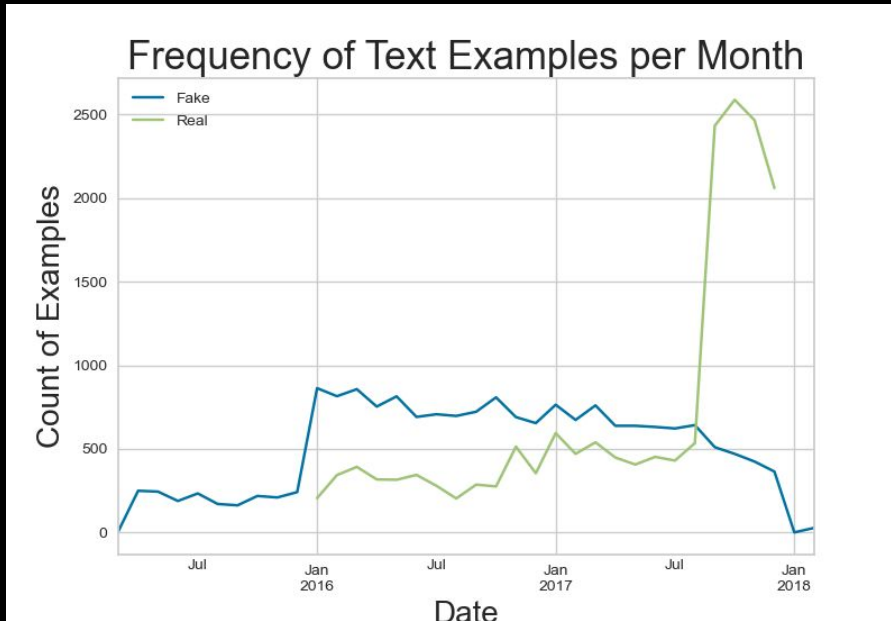

A close-up, high-contrast image of a metallic, robotic skull, likely a Terminator. The skull is dark and metallic, with a prominent glowing red eye in the center. The eye has a textured, grid-like pattern. The skull's mouth is open, showing sharp, white teeth. The lighting is dramatic, highlighting the metallic surfaces and the glowing eye against a dark background. In the bottom right corner, there is a small logo for 'Wallpaper' with a colorful 'W' and the text 'Wallpaper' below it.

Future Work 🧠🔧🤖

- Use **AI generated News dataset** train the model and distinguish between AI and human written news
- Do additional **feature engineering** to improve model performance
- **Automate ML pipeline** to allow client upload a set of labelled fake and real news
- **Adopt more ML models** to compare the accuracy and performance
- Use **RandomizedSearchCV** to obtain the best parameters for our ML model

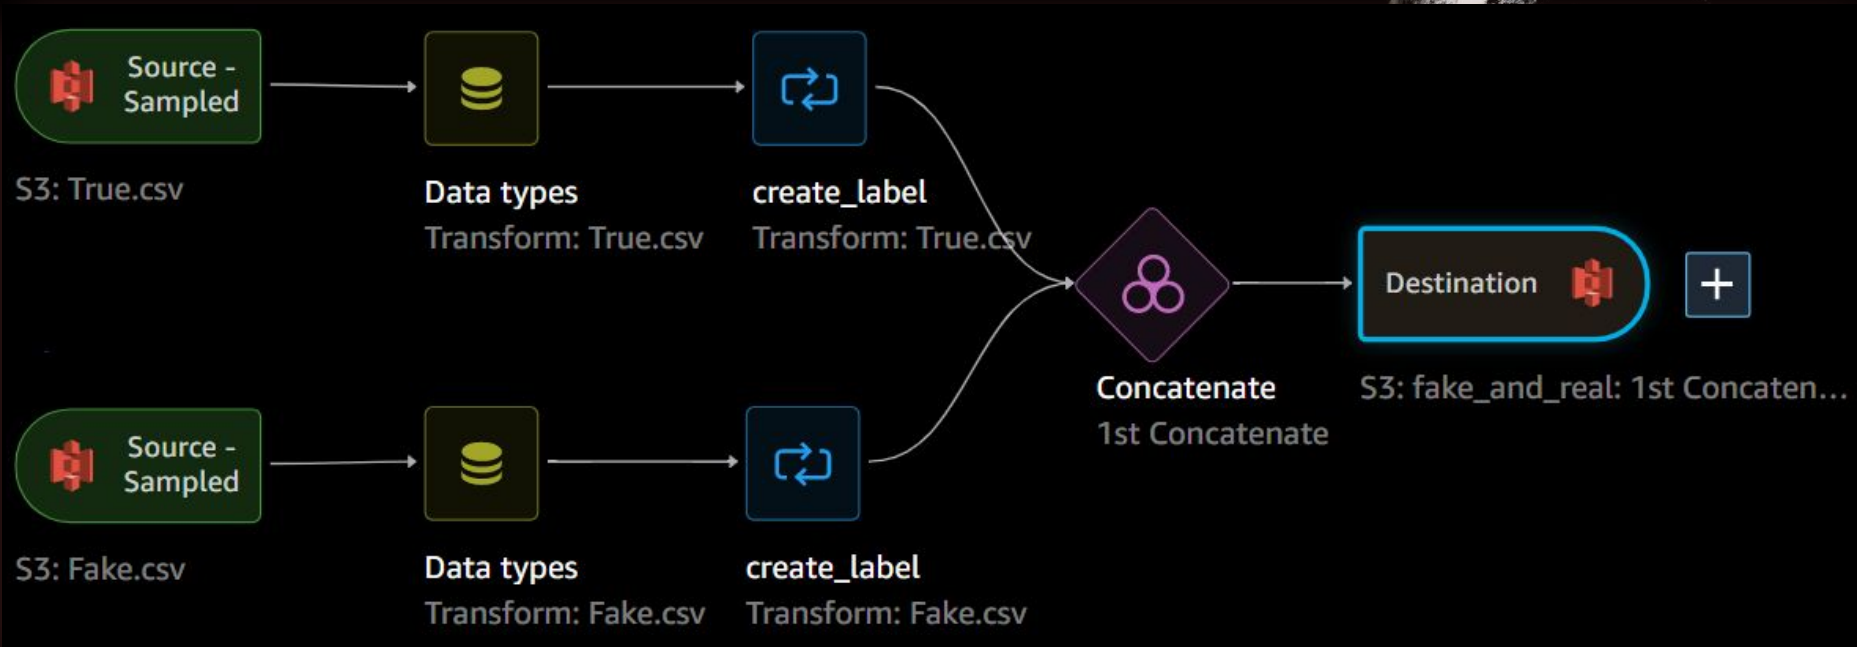

*Thank you for
your attention!*

Appendix

Project Plan visual

AI generated news (previously collected)

The outbreak of COVID-19 has caused widespread panic and confusion across the globe. The virus, which originated in China, has now spread to over 60 countries, with over 80,000 confirmed cases and over 2,700 deaths. The World Health Organization has declared the outbreak a global health emergency, and countries are scrambling to contain the spread of the virus.

There is still much unknown about COVID-19, but what we do know is that it is highly contagious and can cause severe respiratory illness. Symptoms include fever, coughing, and difficulty breathing. The virus is believed to cause a significant number of deaths, particularly in elderly and vulnerable populations.

The best way to protect yourself from the virus is to practice good hygiene and avoid close contact with people who are sick. If you do become sick, it is important to seek medical attention early and isolate yourself from others to prevent further spread of the virus.

The outbreak of COVID-19 has caused widespread disruption and worry around the world. We hope that with more research and information, we can better understand and combat this virus. In the meantime, please take care of yourselves and each other.

is the above news article generated by AI or chatGPT?

As a language model, I cannot determine with certainty whether a news article was generated by AI or written by a human. However, the article you provided seems to be written by a **human** as it contains human-like writing style, structure, and tone. It is possible that an AI language model was used to assist in writing the article, but a human likely provided the input and made the final edits.
